ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: METHOD OF CONSTRUCTING STRIP FOUNDATIONS WITH LONGITUDINAL SOCKET

(57) Abstract: A strip foundation with longitudinal socket is formed of pre-cast concrete socket components (3) hanged within pre-
pared trenches and integrally joined by concrete poured on site. The crane, supplied continuously with the pre-cast socket elements,
moves along the trench side and it is assisted with only a few workers rigging and fixing holding/levelling devices to the pre-cast
longitudinal socket elements and assisting to place them to hang temporarily over the trench. The socket elements are subsequently
adjusted and levelled by features of holding/levelling devices (5) being in sequel, incorporated permanently into the strip footings,
through its protruding reinforcement (3.3), poured into the trench below them. Moving onwards along the trench, under conditions
of no interruptions or any disturbance, the procedure is performed with approximate 1m/1 minute speed what means 60 meters per
hour.
